Service being restored after satellite outage disrupts communications in North America

Many Canadians, especially those in remote areas of the far north, had lost all landline and mobile telephone service as of Thursday after Telian’s payphone satellite service suddenly ceased operating.

The disruption is a "lose of earth link" effect for services customers rely on for both landline and cellular communications, and the Canadian Press reports.

Newspaper and radio stations were the most affected, with most of the communications "in the dark" as the outage continued.

At least 10 radio stations across Canada were affected, including CKRM in Saskatoon, WCBS in Toronto, and WFSU in Fort Myers, Florida.

Elderly members of the community were the most affected, with many relying on the service to keep in touch with their families.

Telian said it will continue to work towards restoring service as soon as possible.

The exact cause of the disruption is still unknown, and it is not yet clear when service will be restored.

The outage has caused significant disruptions to communication services in North America, particularly in remote areas.

Telian has deployed additional satellite capacity to help address the issue.

The company said it is working closely with its partners and customers to minimize the impact of the outage.

Telian has also activated its emergency response plan to address the situation.

Customers are advised to check their local news sources for updates.

The outage has impacted a number of services, including mobile communication, landline phone service, and internet access.

Affected customers are encouraged to contact their service providers for more information on when service will be restored.

The situation continues to be monitored, and updates will be provided as more information becomes available.

Thank you for your patience and understanding during this time.
